

BASEL III: PILLAR 3 DISCLOSURES AS AT 31 MARCH 2019 (Currency: Indian rupees in million)

Scope of application

Qualitative Disclosures

1.

DBS Bank Ltd., India (DBS India Branch Undertaking) used to operate in India as a branch of DBS Bank Ltd., Singapore a banking entity incorporated in Singapore with limited liability. With effect from 1 March 2019, DBS India Branch Undertaking has amalgamated by way of conversion with DBS Bank India Limited (the Bank), a Wholly Owned Subsidiary (WOS) of DBS Bank Ltd., Singapore in accordance with a Scheme of Amalgamation (SOA) duly approved by the Reserve Bank of India (RBI) and licensed to operate as a Bank entity incorporated in India. The below disclosures are prepared for 11 months Banking operations of DBS Bank Ltd., India and 1 month Banking operations of DBS Bank India Limited. As at 31 March 2019, the Bank has a presence of 21 branches and 4 URC's across 21 cities. The Bank does not have any subsidiaries in India nor any interest in Insurance Entities. Thus, the disclosures contained herein only pertain to the Bank.

Not Applicable						

Any restrictions or impediments on transfer of funds or regulatory capital within the banking group:

There are no restrictions or impediments on transfer of funds or regulatory capital within the banking group.

2. Capital Adequacy

Qualitative disclosures

The CRAR of the Bank is 19.69% as computed under Basel III norms, which is higher than the minimum regulatory CRAR requirement (including CCB) of 11.875%.

The Bank's capital management framework is guided by the existing capital position, proposed growth and strategic direction. Growth opportunities have resulted in an increasing and continuing need to focus on the effective management of risk, and commensurate capital to bear that risk. The Bank carefully assesses its growth opportunities relative to the capital available to support them, particularly in the light of the economic environment and capital requirements under Basel III. The Bank maintains a strong discipline over capital allocation and ensuring that returns on investment cover capital costs.

Quantitative disclosures

	Particulars	31 Mar 19
A	Capital requirements for Credit Risk (Standardised Approach) *	30,058
В	Capital requirements for Market Risk (Standardised Duration Approach) *	
	- Interest rate risk	5,728
	- Foreign exchange risk	360
	- Equity risk	28
С	Capital requirements for Operational risk (Basic Indicator Approach) *	1,662
D	CET1 Capital Ratio (%)	14.62%
Е	Tier1 Capital Ratio (%)	14.62%
F	Total Capital Ratio (%)	19.69%

* Capital required is calculated at 8% of Risk Weighted Assets for CVA, Market Risk and Operational Risk and at 10.875% of Risk Weighted Assets for others.

3. General Disclosures

As part of overall corporate governance, the Bank has set up a framework which defines authority levels, oversight responsibilities, policy structures and risk appetite limits to manage the risks that arise in connection with the use of financial instruments. On a day-to-day basis, business units have primary responsibility for managing specific risk exposures while Risk Management Group (RMG) exercises independent risk oversight on the Bank as a whole. RMG is the central resource for quantifying and managing the portfolio of risks taken by the Bank.

Under the DBS India risk governance structure, the India Risk Exco ('Risk EXCO') serves as the Location Risk Committee for governance over Credit, Market & Liquidity, Operational Risk and other risks under the supervision of Board Risk Management Committee (BRMC). The BRMC oversees the risk governance, risk approaches and limits of DBS India and ensures that these risks are effectively managed within the bank's overall risk governance framework.

A) General Disclosures for Credit Risk

Qualitative Disclosures

Credit Risk Management Policy

The credit policies and basic procedures of the Bank relating to its lending activities are contained in the India specific Local Credit / Loan Policy of the Bank as well as Group Core Credit Policies and other standards followed across all DBS group entities. These are based on the general credit principles, directives / guidelines issued by the RBI from time to time as well as instructions and guidelines of DBS Bank Ltd, Singapore (hereinafter referred to as 'the Head Office'). In the unlikely event of any conflict amongst the RBI guidelines and Head Office Guidelines, the more conservative policy / guideline is followed.

The Group Core Credit Policies and the India Credit / Loan policy outlines the Bank's approach to Credit Risk Management and sets out the rules and guidelines under which the Bank would develop and grows its lending business. These policies provide guidance to the Bank's Corporate Banking, SME Banking, Financial Institutions Group and Consumer Banking to manage the growth of their portfolio of customer assets in line with the Bank's credit culture and profitability objectives, taking into account the capital needed to support the growth.

Supplementary policies to the main Group Core Credit Policy and the India Credit / Loan policies have also been laid out, for certain types of lending and credit-related operations. These include subject specific policies relating to risk ratings, Default policy, Specialized Lending etc., as well as guidelines for Real Estate lending, NBFC lending, hedging of FX exposures, credit risk mitigation, sectoral and individual / group borrower limits, bridge loans, bill discounting, collateral valuation, collection management, etc.

The India Credit Risk Committee, comprising CEO, CRO and other senior IBG and CBG representatives and Credit Officers, and Head of SAM meets on a monthly basis. The committee has oversight of Credit risk related strategy planning, implementing necessary guidelines, procedures to manage identified risks, credit portfolio movements and other relevant trends in the Credit Risk Committee and shared with Head office as required.

Responsibility for monitoring post-approval conditions for institutional borrowers resides with the Credit Control Unit (CCU), which reports in to Head of CCU in Singapore, with local oversight of the Chief Risk Officer (CRO) in India. The responsibility for risk reporting is with the Credit Risk - COO team which reports to the CRO in India. The Risk Based Supervision (RBS) submission to RBI contains further details on the same.

Advances are classified into performing and non-performing advances (NPAs) as per RBI guidelines. NPA's are further classified into sub-standard, doubtful and loss assets based on the criteria stipulated by RBI.

DBS Bank India Limited

4. Disclosures for Credit Risk: Portfolios subject to Standardised approach

Qualitative Disclosures

Currently based on our clientele, ratings of the following agencies have been used i.e. CARE, CRISIL, India Ratings and Research Private Ltd., ICRA, Brickwork, SME Rating Agency Pvt Ltd (SMERA), Infomerics, Standards & Poors, Moody's and Fitch for all exposures. The Bank assigns Long term credit ratings accorded by the chosen credit rating agencies for assets which have a contractual maturity of more than one year. However, in accordance with RBI guidelines, the Bank classifies all cash credit exposures as long term exposures and accordingly the long term ratings accorded by the chosen credit rating agencies are assigned. The Bank uses both issue specific and issuer ratings. In accordance with RBI guidelines, for risk-weighting purposes, short-term ratings are deemed to be issue-specific.

Quantitative Disclosures

Categorization of Credit Exposures (Fund and Non Fund based) * classified on the basis of Risk Weightage is provided below:

Particulars	31 Mar 19
< 100 % Risk Weight	375,757
100 % Risk Weight	109,182
> 100 % Risk Weight	18,156
Total	503,095

* Credit Exposures are reported net of NPA provisions and provision for diminution in fair value of restructured advances classified as Standard.

5. Disclosures for Credit Risk Mitigation on Standardised approach Qualitative Disclosures

This is detailed in our policy on Credit Risk Mitigation techniques and Collateral Management.

Quantitative Disclosures

Currently, eligible financial collateral in the form of fixed deposits under lien, amount accepted under Parallel Deposit and guarantees issued by eligible guarantor as specified in RBI guidelines have been used as credit risk mitigants. In the case of fixed deposits under lien, the Bank reduces its credit exposure to counterparty by the value of the fixed deposits.

The details of exposures (after application of haircut) wherein the bank has used credit risk mitigants (CRM) are as under:

Product	Amount of CRM
Fund based exposure	3,653
Total	3,653

6. Disclosure on Securitisation for Standardised approach

The Bank has not undertaken any securitisation and hence this disclosure is not applicable.

7. Disclosure on Market Risk in Trading book

Qualitative disclosures

Market Risk arises from changes in value from changes in interest rates yields, foreign exchange rates, equity prices, commodity prices, credit spreads and the impact of changes in the correlations and volatilities of these risk factors. The Bank's market risk appetite is determined by the Board of Directors through the Board Risk Management Committee, with detailed limit frameworks recommended by the appropriate risk committees. The Market & Liquidity Risk Committee and the Risk Executive Committee, oversees the market risk management infrastructure, sets market risk control limits and provides enterprise-wide oversight of all market risks and their management.

The Bank's market risk framework identifies the types of the market risk to be covered, the risk metrics and methodologies to be used to capture such risk and the standards governing the management of market risk within the Bank including the limit setting and independent model validation, monitoring and valuation.

The principal market risk appetite measure is Expected Shortfall. The Expected Shortfall is supplemented by risk control measures, such as sensitivities to risk factors, including their volatilities, as well as P&L loss triggers (Management Action Triggers) for management action.

Expected Shortfall estimates the potential loss on the current portfolio assuming a specified time horizon and level of confidence. The Expected Shortfall methodology uses a historical simulation approach to forecast the market risk. Expected Shortfall risk factor scenarios are aligned to parameters and market data used for valuation. The Expected Shortfall is calculated for T&M trading, T&M banking and Central Operations book.

The Bank computes the trading Expected Shortfall on a daily basis, while the banking Expected Shortfall is computed on a weekly basis. The trading Expected Shortfall forecasts are back-tested against the profit and loss of the trading book to monitor its predictive power.

To complement the Expected Shortfall framework, regular stress testing is carried out to monitor the Bank's vulnerability to shocks. Also, monthly and annual P/L stop loss limits are monitored on a daily basis for the Trading book.

The risk control measures such as Interest rate PV01 (IRPV01) and FX delta measure the interest rate and FX rate risk to the current portfolio. The IR PV01 measures the change in the Net present value (NPV) due to an increase of 1 basis point in interest rates. The FX delta measures the change in NPV due to an increase of 1 unit in FX rates. The currency wise IRPV01 and FX Delta is calculated daily for T&M trading, T&M banking and ALCO book.

The other risk control measures such as Credit spread PV01 (CSPV01) and Jump to default (JTD) measures the change in the NPV due to an increase of 1 basis point in credit spreads and the expected loss due to immediate default respectively. The CSPV01 and JTD are calculated daily for T&M trading book.

Quantitative Disclosures

Capital Requirement for Market Risk *

Particulars	31 Mar 19
Interest rate risk	5,728
Foreign exchange risk (including gold)	360
Equity position risk	28

* Capital required for Market Risk is calculated at 8% of Risk Weighted Assets.

3. Operational Risk

Operational Risk

Qualitative Disclosures

Strategy and Process

The DBIL (DBS Bank India Limited Operational Risk Management (ORM) policy:

- Defines operational risk and the scope of its application;
- Establishes the dimensions of operational risk;
- Provides a consistent Group wide approach for managing operational risk in a structured, systematic and consistent manner across DBIL.

Operational risk arises from inadequate or failed internal processes, people, systems or from external events. It includes legal risk but excludes strategic or reputation risk. DBIL adopts a zero-tolerance mindset for operational risk that can endanger the franchise.

The policy comprises of risk governance, risk policies, risk mitigation programmes, risk and control self-assessments, risk event management and reporting, and key risk indicators.

The ORM policy includes inter-alia:

- ORM Governance key responsibilities (Board, Senior Management, Location / Business level, unit operational risk managers control functions, Risk Management Group – Operational Risks and Internal Audit.
- b) ORM guiding principles
- c) Core Operational Risk Standards (CORS)
- d) Controls and mitigations:
 - Internal controls

e)

f)

- Group Insurance Programme; and
- Business Continuity Management
- Risk Tools and Mechanisms comprising:
- Risk & Control Self-Assessment (RCSA)
- Operational Risk Event Management & Reporting (OREM&R)
- Key Risk Indicators (KRI)
- Scenario Assessment (SA)
- Internal Controls
- Issue Management & Action Tracking
- Risk profiling and reporting
- Risk Quantification & Disclosure
- Loss Provisioning / Capital Allocation

Structure and Organisation

The Bank has in place an India Operational Risk Committee (IORC) which meets on a monthly basis to discuss Operational Risk issues / related matters. The committee is chaired by the Chief Risk Officer (CRO) and is administered by the Head - Operational Risk, India. The committee reports to the Risk Exco. This ensures appropriate management and oversight of the prevailing operational risks in the Bank.

The IORC comprises of Country Head, Chief operating officer and the Heads of Consumer Banking Group, Global Transaction Services, Treasury & Markets, Institutional Banking – Chief Operating Officer, Finance, Legal & Compliance, Internal Audit, Chief Information Security Officer, Head T&O Risk Management and GPS and other invited members as defined in the Terms of Reference (TOR)

As part of the Bank's ORM structure, an independent Operational Risk function is in place led by the local Head of Operational Risk, who reports to the CRO, India and functionally to the Group Head of Operational Risk at the Head Office in Singapore. Coverage includes identifying, assessing, controlling / mitigating risk, monitoring, reporting and measuring risk and also ensuring compliance with DBS Group standards and meeting local (RBI) and MAS regulatory requirements relating to Operational Risk.

DBIL adopts the three lines of defence model for the management of operational risk. In addition to the independent second line of defence by Risk Management Group -Operational Risk, Unit Operational Risk Managers (UORM) are appointed within the first line of defence for all Business Units (BU) and Support Units (SU) to support and implement the risk management policy / standards & processes and to ensure maintenance of adequate controls on an ongoing basis. Periodic training / orientations / discussions are held to keep UORM updated with key developments. As the third line of defence, Audit provides independent assurance.

Risk Mitigation Programs

Internal Controls

The day-to-day management of Operational Risk within the Bank is through maintenance of a comprehensive system of internal controls. An effective internal control system is a combination of a strong control environment and appropriate internal control procedures. These internal controls comprise of preventive, detective, directive and corrective controls.

Group Insurance Programme (GIP)

GIP helps to mitigate operational risk losses from significant risk events.

The key objective of GIP is to reduce low frequency high impact financial losses via transfer of loss to external funding sources (insurers). In line with DBIL ORM philosophy, high frequency low impact operational losses are managed through establishment of strong internal controls.

Business Continuity Management (BCM) is a key Operational Risk programme of DBIL to minimize the impact of a business disruption, irrespective of cause, and to provide an acceptable level of business until normal business operations are resumed. BU/SUs are to comply with the BCM Policies and Standards established by Business Continuity Management (BCM).

BCM includes the following

- Establishment of ownership, roles and responsibilities
- Risk analysis
- Business impact analysis
- Recovery strategies
- Familiarisation of emergency response and crisis management plans
- Regular review and maintenance
- Regular, complete and meaningful testing

Risk Reporting and Measurement

Operational Risk related MIS is reported through the central ORM system (GRC – Governance, Risk and Control), as follows:

- Incident Management (INC) Module in GRC for reporting of Risk Events (including near miss and timing error, etc.)
- Issue and Action Management (I&A) Module in GRC for tracking of issues and actions emanating from Risk Events, Audit Issues, Regulatory Issues and other risk related issues
- Key Indicator (KI) Module in GRC for reporting and monitoring of Key Risk Indicators (KRI)
- Risk and Control Self-Assessment (RCSA) Module in GRC- to facilitate and record the assessment of the Risk and Control Self-Assessment process. RCSA review and assessment is performed as per risk-based frequency approach.

The Operational Risk Profile including relevant MIS relating to the above is placed at the monthly India Operational Risk Committee (IORC).

Approach for operational risk capital assessment

The Bank currently adopts the Basic Indicator Approach to calculate capital requirements for operational risk.

Interest rate risk in the banking book (IRRBB)

Qualitative Disclosures

The Asset and Liability Committee ("ALCO") oversees the structural interest rate risk and funding liquidity risk in the Bank. The Market & Liquidity Risk Committee (MLRC) ensures that the exposures are within prudent levels. Structural interest rate risk arises from mismatches in the interest rate profile of customer loans and deposits. This interest rate risk has several aspects: basis risk arising from different interest rate benchmarks, interest rate re-pricing risk, yield curve risks and embedded optionality. To monitor the structural interest rate risk, the tools used by DBS include re-pricing gap reports based on traditional as well as duration gap approach, sensitivity analysis and income simulations under various scenarios.

Quantitative Disclosures

The Bank uses the Duration Gap approach to measure the impact of Market Value of Equity (MVE) for upward and downward rate shocks. This measures the potential change in MVE of the Bank for a 200 bps change in interest rates. The change in MVE due to a 200 bps change in interest rates are (for banking and trading book):-

DBS

DBS Bank India Limited

R Million

Quantitative Disclosures

Change in MVE due to a 200 bps change in interest rates	IN
31 st March, 2019	

The impact on Earnings is computed as per the definition laid down in the ALM Policy of the Bank. Per the policy, Earnings-at-Risk (EaR) measures the interest rate risk from the earnings perspective. It is computed as an impact (over a 1-year horizon) of a 1% parallel shift in the yield curve on the Bank's earning. This is computed using the net IRS gaps for each bucket up to 1 year. The aggregate of these approximates the net interest income impact of a 1% parallel shift (increase in interest rates) in the yield curve over a 1 year horizon and acts as a useful tool in the hands of the MLRC to monitor and assess the impact of Interest rate risk exposure of the Bank on its NII.

EaR is computed for the banking book

EaR on the INR book (banking)	INR Million
31 st March, 2019	137.39

10. General Disclosure for Exposures Related to Counterparty Credit Risk *Qualitative Disclosures*

USE OF ECONOMIC CAPITAL (EC) FOR CONCENTRATION RISK MANAGEMENT While the Bank firmly complies with regulatory capital requirements at all times, we recognize the need to have more robust methodologies to measure capital usage. The Bank has adopted both qualitative and quantitative measures to address credit concentration risk. In addition to the regulatory limits, there are internally developed risk limits on the amount of exposure, as a percentage of the total exposure, that can be taken on any single industry, to avoid any sector concentration. Additionally, the Bank has developed maximum exposure limit norms which stipulates the amount of exposure that may be taken on a borrower considering its turnover and credit risk rating. In order to address the geographic concentration risk, the bank has implemented a policy on the maximum amount of advance, as a percentage of the total advances, which can be booked in a branch. The quantitative measurement of concentration risk, both for name and sector concentration and allocation of additional capital is one of the component of the Bank's ICAAP.

CREDIT RISK MITIGANTS

Collateral

Where possible, the Bank takes collateral as a secondary recourse to the borrower. Collateral includes cash, marketable securities, properties, trade receivables, inventory and equipment and other physical and financial collateral. The Bank may also take fixed and floating charges on the assets of borrowers. It has put in place policies to determine the eligibility of collateral for credit risk mitigation, which include requiring specific collaterals to meet minimum operational requirements in order to be considered as effective risk mitigants.

When a collateral arrangement is in place for financial market counterparties covered under market standard documentation (such as Master Repurchase Agreements and International Swaps and Derivatives Association (ISDA) agreements), collateral received is marked to market on a frequency mutually agreed with the counterparties.

Other Risk Mitigants

The Bank manages its credit exposure from derivatives, repo and other repo-style transactions by entering into netting and collateral arrangements with counterparties where it is appropriate and feasible to do so. The credit risk associated with outstanding contracts with positive mark to market is reduced by master netting arrangements to the extent that if an event of default occurs, all amounts with a single counterparty in a netting-eligible jurisdiction are settled on a net basis.

The Bank may also enter into agreements which govern the posting of collateral with derivative counterparties for credit risk mitigation (e.g. Credit Support Annexes under ISDA master agreements). These are governed by internal guidelines with respect to the eligibility of collateral types and the frequency of collateral calls.

In addition, the Bank also uses guarantees as credit risk mitigants. While the Bank may accept guarantees from any counterparty, it sets internal thresholds for considering guarantors to be eligible for credit risk mitigation.

COUNTER PARTY RISK MANAGEMENT

Counterparty risk that may arise from traded products and securities is measured on a loan equivalent basis and included under the Bank's overall credit limits to counterparties. Issuer Default Risk that may arise from traded products and securities are generally measured based on jump-to-default computations.

The Bank actively monitors and manages its exposure to counterparties in over-thecounter (OTC) derivative trades to protect its balance sheet in the event of counterparty default. Counterparty risk exposures which may be materially and adversely affected by market risk events are identified, reviewed and acted upon by management and highlighted to the appropriate risk committees. In addition, the Bank's risk measurement methodology takes into account the higher risks associated with transactions that exhibit a strong relationship between the creditworthiness of a counterparty and the expected future replacement value of a relevant transaction (so called wrong-way risk) as identified during the trade booking process. The current exposure method is used for calculating the Bank's net credit exposure and regulatory capital for counterparty exposures, using the mark-to-market exposures with an appropriate add-on factor for potential future exposures.

14. Equities – Disclosure for Banking Book Positions

In accordance with the RBI guidelines on investment classification and valuation, Investments are classified on the date of purchase into "Held for Trading" ('HFT'), "Available for Sale" ('AFS') and "Held to Maturity" ('HTM') categories (hereinafter called "categories"). Investments which the Bank intends to hold till maturity are classified as HTM securities.

The Bank has no investment in HTM portfolio during the year ended March 31, 2019. However, the Bank has investment in shares/Optionally Convertible Debentures which are received on conversion of debt which are classified under AFS category in accordance with RBI guidelines.

LEVERAGE RATIO

The Basel III leverage ratio is defined as the capital measure (Tier-1 capital of the risk based capital framework) divided by the exposure measure, with this ratio expressed as a percentage.

As per RBI guidelines, disclosures required for leverage ratio for the Bank at March 31, 2019 are as follows: Indian rupees in million

On-	balance sheet exposures	
1	On-balance sheet items (excluding derivatives and SFTs, but including collateral)	518,807
2	(Asset amounts deducted in determining Basel III Tier 1 capital)	(3,173
3	Total on-balance sheet exposures (excluding derivatives and SFTs) (sum of lines 1 and 2)	515,634
Deri	vative exposures	
4	Replacement cost associated with all <i>derivatives</i> transactions (i.e. net of eligible cash variation margin)	35,056
5	Add-on amounts for PFE associated with all derivatives transactions	117,518
6	Gross-up for derivatives collateral provided where deducted from the balance sheet assets pursuant to the operative accounting framework	
7	(Deductions of receivables assets for cash variation margin provided in derivatives transactions)	
8	(Exempted CCP leg of client-cleared trade exposures)	
9	Adjusted effective notional amount of written credit derivatives	
10	(Adjusted effective notional offsets and add-on deductions for written credit derivatives)	
11	Total derivative exposures (sum of lines 4 to 10)	152,574
Sec	urities financing transaction exposures	
12	Gross SFT assets (with no recognition of netting), after adjusting for sale accounting transactions	1,994
13	(Netted amounts of cash payables and cash receivables of gross SFT assets)	
14	CCR exposure for SFT assets	848
15	Agent transaction exposures	
16	Total securities financing transaction exposures (sum of lines 12 to 15)	2,84
Oth	er off-balance sheet exposures	
17	Off-balance sheet exposure at gross notional amount	217,89
18	(Adjustments for conversion to credit equivalent amounts)	(144,093
19	Off-balance sheet items (sum of lines 17 and 18)	73,80
Сар	ital and total exposures	
20	Tier 1 capital	55,91
21	Total exposures (sum of lines 3, 11, 16 and 19)	744,85
Lev	erage ratio
